

These are the **Devices and Printer Recommendations** for using Certain Check-In.

## Recommended Printers

### Google Android

The easiest printers to connect with and use are the cloud-ready printers Google lists here:

<https://www.google.com/cloudprint/learn/printers/>

Any additional printers that are not on the list can be configured to work with your Android phone, but this will require additional manual work.

### Apple iOS

The only printers iOS devices work with are the AirPrint-certified printers Apple lists here:

<https://support.apple.com/en-us/HT201311>

Note: unlike Android, no additional work is needed to custom fit any printer not found on the list above.

### Windows 10

As Windows 10 devices (tablets/laptops/desktops) have USB ports, any printer can be hardwired (via USB) to the device to print. Though this provides greater flexibility, it is additional work to go through the Control Panel > Printer settings to configure the badge to print correctly.

### Within our offices and for acceptance testing we use:

For printers, we recommend any Brother QL series printer (QL-700, QL-710W, QL-720NW, QL-800, QL-810W).

## Recommended Devices

We recommend any Google devices on Android (Nexus, Pixel).

We recommend iOS devices that have 64-bit chip architectures (Apple A7 chip and onwards), which are iPhone 5S and on, iPad Air and on, and iPad Mini 2 and on.

We recommend Microsoft Surface devices.

### Within our offices and for acceptance testing we use:

- Google Nexus 5X
- iPad Air (running iOS 11)
- iPhone 7 (running iOS 10)
- iPad Mini 2 (running iOS 9)
- Microsoft Surface Pro 3 (running Windows 10)
